

Job Description

FPT Corporation - Senior Backend Developer

Company	FPT Corporation
Office	FPT Cau Giay Building, Duy Tan Street, Cau Giay Ward, Hanoi City, Vietnam
Position	Senior Backend Developer
Employment Type	Full-time
Department	Digital Technology / Software Engineering
Experience Level	Senior

About the Role

FPT is seeking a Senior Backend Developer to build scalable backend services for enterprise and digital transformation products. The role requires solid experience in API development, database design, cloud deployment, and technical collaboration.

Key Responsibilities

- Design and develop backend services, RESTful APIs, and microservices.
- Contribute to architecture decisions, code review, and technical mentoring.
- Optimize database schemas, queries, and application performance.
- Collaborate with frontend, QA, DevOps, and product stakeholders.
- Support deployment, monitoring, and continuous improvement activities.

Required Qualifications

- 5+ years of backend development experience in production environments.
- Strong proficiency in Java, Spring Boot, and REST API design.
- Solid knowledge of PostgreSQL or MySQL and system design fundamentals.
- Experience with Docker, CI/CD pipelines, Git workflows, and cloud platforms.
- Good English communication and ability to work effectively in agile teams.
- Bachelor's degree in Computer Science, IT, or a related field.

Preferred Qualifications

- Experience with AWS, Kubernetes, Redis, Kafka, or Elasticsearch.
- Experience mentoring developers or leading backend modules.

Benefits

- Competitive compensation and performance review.
- Professional development opportunities and technical training.
- Dynamic working environment with large-scale projects.
