

JOB DESCRIPTION

- Position : **AI Engineer**
- Working type : **Full-time**
- Location : **Hanoi**

OVERVIEW

FPT Software is a member company of FPT Corporation. Established in 1999, FPT Software is a leading provider of software services and solutions for international clients. With over 30,000 employees, the company has a presence in more than 30 countries worldwide. For many consecutive years, FPT Software has been voted as one of the most favorite employers and ranked among the top companies with the best working environment in Vietnam.

We are a Next Generation Technology (NGT) unit, focusing primarily on AI, Data, and Machine Learning. Our mission is to pioneer the application of emerging technologies to deliver breakthrough solutions that drive digital transformation for global clients.

We believe that diversity is key to fostering innovation. That's why we actively seek diverse talents, including expatriates and international professionals, to enrich our team with unique perspectives that contribute to our sustainable growth and success.

If you are an expatriate or global-minded professional looking for an inclusive and international workplace, we welcome you to join us – let's shape the future of technology together.

RESPONSIBILITIES

We are seeking a motivated Junior AI / LLM Engineer to support the development and deployment of Generative AI applications on cloud platforms (AWS/Azure).

This role is suitable for candidates who are building foundational experience in LLM engineering, backend development, and cloud-based AI systems, working under guidance from senior engineers.

You will mainly contribute to AI applications such as chatbots, copilots, and basic RAG systems, while continuously learning modern AI engineering practices.

- **AI / LLM Application Development**
 - Assist in developing AI applications using LLMs and generative AI frameworks
 - Integrate APIs from providers such as OpenAI, Anthropic, Gemini
 - Implement basic prompt engineering and context handling under guidance
- **RAG & Knowledge Systems**
 - Support implementation of RAG pipelines
 - Work with embeddings and vector search systems
 - Assist in integrating vector databases (e.g., Chroma, Pinecone, Elasticsearch)
- **Agentic Systems** (Basic Exposure)

- Support development of simple AI agents or workflows
- Learn and apply frameworks such as LangChain or LlamaIndex
- Follow design patterns defined by senior engineers
- **Backend & API Development**
 - Develop basic backend services using Python (FastAPI / Flask)
 - Build simple APIs for AI model integration
 - Support testing and debugging of backend services
- **Cloud Deployment & MLOps (Learning Phase)**
 - Assist in deploying applications on AWS/Azure environments
 - Work with basic services such as:
 - AWS: EC2, S3, Lambda (basic usage)
 - Azure: App Service, Functions, Blob Storage
 - Support CI/CD pipeline setup and execution
 - Monitor logs and system behavior under supervision
- **Model Evaluation (Basic Level)**
 - Support testing AI outputs (accuracy, latency, cost awareness)
 - Assist in improving results via prompt tuning or retrieval adjustments
 - Participate in testing and validation activities
- **Collaboration**
 - Work with team members to implement features and fixes
 - Follow technical guidance from senior engineers
 - Document tasks, code, and simple workflows

REQUIRED QUALIFICATIONS

- **Experience:**
 - 0–2 years of experience in AI / ML / Software Engineering
 - Fresh graduates with strong relevant projects are encouraged)
 - Exposure to Python development and basic AI concepts
- **Core Technical Skills:**
 - **Programming:** Python (mandatory), basic understanding of APIs
 - **LLM / GenAI** (Basic understanding):
 - Prompt Engineering (fundamental concepts)
 - Basic RAG workflow awareness
 - **Data:**
 - Basic knowledge of embeddings and vector search

Data preprocessing fundamentals

- **Backend:** Basic knowledge of REST APIs (FastAPI preferred)
- **Cloud:** Basic familiarity with AWS or Azure
- **DevOps (Basic exposure):** Git, Docker (basic usage is a plus)
- **Nice to have:**
 - Hands-on experience through academic or personal projects with LLMs
 - Familiarity with frameworks such as LangChain or LlamaIndex
 - Basic understanding of cloud deployment (AWS/Azure)
 - Coursework or certifications in AI / ML / Cloud
 - Interest in AI agents or automation workflows
- **Soft Skills:**
 - Strong willingness to learn and grow in AI engineering
 - Good problem-solving mindset
 - Ability to follow guidance and collaborate in teams
 - Clear communication of progress and challenges

BENEFITS

- Competitive salary and comprehensive benefits package
- FPT Care insurance plan tailored for FPT employees
- Opportunity to work on cutting-edge AI/ML projects with global impact
- International and diverse work environment
- Professional development and certification support
- Flexible working arrangements and modern technology stack
- Career growth opportunities in a rapidly expanding technology unit

CONTACT

Applicants are kindly requested to submit the following documents:

- CV/ Résumé : A summary of academic background and work experience (mandatory)
- Transcript : A soft copy or scanned image (optional)
- Email subject : [AI Engineer] Fullname_Tel
- Email : ThaoLT16@fpt.com
- Phone/Zalo : 0839.421.997
