

Lê Minh Khoa

Senior Java Fullstack Developer

Personal Information

Phone: (+84) 909 882 771
Email: khoa.le.systemreplace@email.com
LinkedIn: linkedin.com/in/le-minh-khoa
GitHub: github.com/le-minh-khoa
Location: District 3, Ho Chi Minh City, Vietnam
Fit score: 98/100

Career Goals

Senior Java Fullstack Developer aiming to lead System Replace-style core modernization: scalable Java/Spring architecture, high-quality UX/UI, English design documents, and close collaboration with Japanese stakeholders.

Education

2010-2014 B.Sc. Software Engineering, FPT University, Ho Chi Minh City.

Certificates

2025 AWS Solutions Architect Professional
2023 AP - Japan IT Engineer Exam
2021 Oracle Java SE 11
2020 JLPT N3
2019 TOEIC 900

Soft Skills

Technical leadership and mentoring
Business requirement analysis
English design documentation
Japan/Vietnam collaboration

Hobby

Badminton, reading Japanese retail case studies, contributing to internal engineering guidelines.

Experience Summary

Senior Java Fullstack Developer with 11 years of experience delivering core enterprise, retail, inventory, POS integration, and modernization systems. Completed 35+ projects; selected below are the strongest projects for the GEO System Replace JD. Excellent fit for Java/Spring, HTML/CSS/JavaScript, English design documents, testing, UX/UI optimization, large data processing, and collaboration with Japanese teams.

Selected Projects

1. Global Retail Core Replacement Program

Company project | Senior Fullstack Developer / Module Lead

A core modernization program replacing legacy product, price, inventory, and store-operation modules for a multi-country retail business.

- Designed Spring Boot service architecture for item master, store stock, price rules, and operation approval modules.
- Created English basic design, detailed design, API, and test design documents from Japanese mockups and business requirements.
- Optimized large inventory queries through indexing, pagination, read models, and Redis caching.

2. Reuse Item Intake and Valuation System

Company project | Fullstack Technical Lead

System for second-hand item intake, condition grading, price suggestion, and store workflow tracking.

- Modeled reuse-specific workflows including item condition, buyback status, inspection photos, and selling readiness.
- Built Java/Spring APIs and TypeScript screens for store staff with focus on UX speed and low-error data entry.
- Collaborated with Japanese product owners to refine edge cases and acceptance criteria.

3. POS Transaction Integration Platform

Company project | Backend-focused Fullstack Developer

Integration platform connecting POS sales, returns, stock adjustment, and finance posting.

- Implemented idempotent REST/batch interfaces with Spring Boot, PostgreSQL, Kafka, and audit logs.
- Handled retry, reconciliation, duplicate detection, and cross-store transaction correction flows.
- Designed system test scenarios for sales, returns, discounts, and inventory synchronization.

Lê Minh Khoa

Senior Java Fullstack Developer

Profile Snapshot

11 years of fullstack engineering. Strong retail/POS/reuse-adjacent domain, Java/Spring architecture, large-data handling, UX/UI optimization, testing, and Japan collaboration.

Core Strengths

Java/Spring core systems
Retail/POS/inventory domain
English/Japan collaboration
Scalable data processing

Selected Projects and Skills

4. Multi-country Store Operations Portal

Company project | Senior Fullstack Developer

Portal for store tasks, staff role control, shift reports, and exception handling across regions.

- Built responsive UI with HTML/CSS/JavaScript, TypeScript, and reusable enterprise components.
- Implemented role-based access control, approval workflows, and audit trail APIs.
- Improved UX by reducing steps for common store operations and adding clear validation messages.

5. Large-scale Product Master Data Migration

Company project | Technical Lead

Migration of legacy product, category, supplier, and price records into a standardized core data model.

- Created Java validation tools, batch import jobs, and exception dashboards.
- Processed millions of records with chunking, profiling, and rollback strategy.
- Prepared migration runbooks and English status reports for management review.

6. System Quality and Test Automation Framework

Company internal project | Lead Engineer

Reusable test and quality framework for Java/Spring services and web UI regression.

- Defined test design templates, JUnit/Mockito standards, and API testing conventions.
- Integrated contract tests, SonarQube quality gates, and CI reports.
- Mentored engineers on defect analysis, code review, and maintainable architecture.

Skills

Backend Development

- Java, Spring Boot, Spring Security, JPA/Hibernate, RESTful APIs, OAuth2/JWT, Kafka, Redis, batch processing.

Frontend Development

- HTML, CSS, JavaScript, TypeScript, React, WebSquare-style enterprise UI, responsive web/mobile UI.

Databases

- PostgreSQL, MySQL, Oracle, SQL optimization, indexing, transaction handling, schema design, query profiling.

DevOps and Collaboration

- Git, Jira, Confluence, Docker, Kubernetes, Jenkins, GitHub Actions, Linux, AWS, release management.

Quality Engineering

- JUnit, Mockito, integration testing, system test design, API testing, SonarQube, code review, performance tuning.

Languages

Vietnamese native; English professional; Japanese JLPT N3, able to join requirement clarification meetings with Japanese stakeholders.
