

David Robe

Java Spring Full-Stack Developer

Paris, France | david.robe.demo@example.com | +33-6-00-00-2002 | GitHub: demo/davidrobe

PROFESSIONAL SUMMARY

Full-stack developer with 7 years of experience in Java/Spring web applications, retail e-commerce platforms, REST API development, and React frontend maintenance. Strong production software background and testing discipline, with partial exposure to POS/inventory workflows. Japanese collaboration experience is limited.

CORE SKILLS

- Java, Spring Boot, Spring MVC, Spring Data JPA, REST APIs, PostgreSQL, MySQL.
- Frontend: JavaScript, TypeScript, React, HTML, CSS, responsive admin screens.
- Domain: e-commerce, order management, retail catalog, partial inventory and store operations.
- Testing: JUnit, Mockito, Postman API testing, integration testing, code review.
- Documentation: API specifications, technical notes, English design documents.
- Tools: Docker, GitHub Actions, Linux, basic AWS deployment experience.

PROFESSIONAL EXPERIENCE

Java Full-Stack Developer - Retail E-commerce Platform, MarketLoop | 2021 - 2026

- Implemented Spring Boot APIs for product catalog, order tracking, customer profile, and admin reporting modules.
- Maintained React/TypeScript admin UI connected to backend APIs; collaborated with QA to handle UI regression and API testing.
- Worked on inventory visibility features, but POS integration and large-scale system replacement were handled mainly by another team.
- Wrote API specifications, integration test notes, and English technical documents for internal engineering teams.

Backend Developer - SaaS Order Management, CloudNest | 2018 - 2021

- Built Java/Spring backend services for order workflows, notification jobs, and reporting endpoints.
- Added JUnit/Mockito tests and reviewed pull requests for junior developers.

Junior Web Developer, NovaWeb | 2016 - 2018

- Developed Java web screens and REST API integrations for internal business tools.

SELECTED PROJECTS

- Retail admin portal: React screens for product editing, order search, and stock visibility using Spring Boot APIs.
- Order service refactor: migrated legacy controller logic to service-layer Spring Boot components.
- API quality improvement: added Postman collections, JUnit tests, and clearer API specification templates.

EDUCATION

- M.Sc. Software Engineering - University of Lille, 2016

LANGUAGES AND COLLABORATION

- English: Professional working proficiency; French: Native.
- Japanese: basic greetings only; no regular Japan-side collaboration experience.
